

One bad tool call can **leak your data,** **burn your budget,** and **hijack your agent.**

MCP connects AI agents to your databases, APIs, and shell. That power is the attack surface. **MCP-Bastion** + **MCP Test Harness** lock it down: the only **free, zero-infra** stack that tests, scans, and enforces the whole MCP path.

FREE & OPEN

ZERO-INFRA, runs in-process

PUBLISHED BENCHMARKS

WHY IT MATTERS

Three ways an MCP agent gets you breached

The MCP spec ships with no auth, no authorization, and no transport security of its own. In 2026 the Cloud Security Alliance flagged an MCP "security crisis" with multiple critical CVEs.

Data exfiltration

A hidden instruction in a tool result makes the model email your files or read `~/.ssh/id_rsa`. One prompt, real PII gone.

Denial-of-wallet

A runaway loop calls a paid tool thousands of times. Your cloud and LLM bill spikes before anyone notices.

Tool poisoning

A malicious or drifted tool description, or a look-alike name, hijacks the agent. The confused-deputy attack.

THE SOLUTION

One stack. The whole lifecycle. No infra.

Prove it in CI, scan before deploy, enforce in production, with a drop-in library, not a gateway you have to run.

PROOF, NOT PROMISES

We publish the numbers. Nobody else does.

100%

Injection precision

0% false positives on realistic customer-support, devops and data traffic. Recall 100%. F1 1.000.

100%

Tool-poisoning caught

exfil, base64/hex, nested-schema, shadow-tools, all detected. 0% false positives.

<5ms

Overhead, in-process

No third-party safety API. Your data never leaves your network.

Best precision AND best recall AND zero false positives

The only detector in the ideal corner

72.7% to 100% detection, false positives stayed at zero

Every block, every dollar, every redaction on one screen

RUNTIME GOVERNANCE

Zero-trust controls from bastion.yaml — Agent IAM, supply-chain verification, and transport hardening. Block counts refresh from live

UNIQUE · NO COMPETITOR HAS THIS

Live spend as a security control

Cost-aware governance stops denial-of-wallet before the bill lands: degrade the model, block expensive chains, cap per-session and per-day, and export signed attestation.

FinOps meets security. Denial-of-wallet caps on by default (15 calls / 60s / 50k tokens).

SHIFT LEFT

Prove your MCP server is safe before you ship

The graphic features a central shield with a checkmark, surrounded by circuit-like lines. To the left, a code snippet shows a test function:

```
def test_tool_call(mcp_server):  
    result = mcp_server.call_tool("ping")  
    assert result.status == "ok"
```

. To the right, a JSON snippet shows a tool call:

```
{  
  "jsonrpc": "2.0",  
  "method": "tools/call",  
  "params": {  
    "name": "ping"  
  },  
  "id": 1  
}
```

. Below the shield, a terminal window displays test results:

```
Test session starts  
platform linux -- Python 3.11.0, pytest-8.2.0  
collected 12 items  
  
tests/test_tools.py ..... (100%)  
tests/test_resources.py ..... (100%)  
  
===== 12 passed in 0.43s =====
```

. The text "MCP Test Harness" is prominently displayed, followed by "pytest-style testing for MCP servers". At the bottom, five icons represent features: Fast (Built for speed), Extensible (Plugin architecture), Pythonic (pytest-style API), Reliable (Deterministic tests), and Open Source (Apache-2.0 License). A link to github.com/your-org/mcp-test-harness is at the bottom.

MCP Test Harness
pytest-style testing for MCP servers

Fast Built for speed | Extensible Plugin architecture | Pythonic pytest-style API | Reliable Deterministic tests | Open Source Apache-2.0 License

github.com/your-org/mcp-test-harness

- ✓ Deterministic, LLM-free CI gate (pytest-style, 840+ self-tests)
- ✓ Functional, regression, performance SLO, security packs, chaos
- ✓ Conformance badge, stateless (SEP-2575) and stateful MCP
- ✓ SARIF / JUnit / HTML, GitHub Action, CycloneDX SBOM + CRA
- ✓ Pairs with Bastion: test the policy in CI, enforce it in prod

One HTML report: functional, performance, security, conformance

WHY US

Everyone else covers one phase. We cover all three.

Capability	OUR STACK	Lasso	Enkrypt	Doberman	Invariant	NeMo
Test · Scan · Enforce	ALL 3	1	1	1	1	1
Published precision / recall	100 / 100 / 0	×	×	×	×	×
Cost / denial-of-wallet	✓	×	×	×	×	×
Free to use	✓ FREE	✓	paid	✓	cloud	✓
Zero-infra (no chokepoint)	✓	×	×	×	~	×

Only stack that is **free**, **zero-infra**, and covers the **whole lifecycle** with **published** numbers.

GET STARTED IN MINUTES

Secure your MCP agent today.

```
pip install mcp-bastion-python then secure_fastmcp(mcp)
```

```
pip install mcp-test-harness then mcp-test init
```

- ✓ Drop-in library. No gateway, no chokepoint, no ops.
- ✓ Runs on a laptop, in CI, at the edge, or air-gapped.
- ✓ Your data stays in your process. No third-party safety API.
